This switch works perfectly. While working at home using two monitors and connecting to my work PC via GoToMyPC, I can easily spread the session across both monitors. In other words, two monitors at work = two monitors at home. I recently added a third monitor at home. I was hoping to keep working via GoToMyPC on two monitors while keeping the third one open for non-work stuff. Instead, GoToMyPC tries to spread across all three monitors, making for a very uneven and difficult workspace. I didn't want to have to keep unplugging the third monitor from my computer. Too much wear and tear. I contacted GoToMyPC, but they had no solution. So I started looking for an HDMI kill switch. I figured I could kill the signal to prevent GoToMyPC from spreading across all three monitors. I found this little switch. Although it's meant to split an HDMI signal, if I don't use the second HDMI input, it makes for an excellent kill switch. Sure, I don't get to use my third monitor during the workday, but at least I don't have to unplug and replug the HDMI cable from my computer.

TLDR: This switch works extremely well as an HDMI kill switch.

Ted James

★★★★★ **Works perfectly**
